

CASE STUDY:

Worked with a Retailer to reduce transfer and handling of cash when the registers were being replenished.

THE CHALLENGE(S):

- Customer was trying to find a means to minimize the handling of cash from start to end of shift, reducing managements time of cash drawer (till) handling
- Required a quick way to remove excess funds into a locally secured safe to maintain corporate loss prevention and theft deterrence policies
- Wanted to eliminate the exposure of excess cash to the public's view while in transition, from the till to the manager's office
- Minimal storage space was available within the cash checkouts

THE SOLUTION:

- Provided an iButton® access control system, controlling a four point locking mechanism into a custom designed cash safe

BENEFITS OF SOLUTION IMPLEMENTED:

- By providing a localized electronic cash handling safe, checkout staff could deposit cash securely and instantly, while maintaining corporate procedures for loss prevention
- The use of cash handling bags provided concealment of excess cash during transfer to stores main safe
- Worked with a safe manufacturer to custom build a cash handling safe to fit in the existing checkout fixtures
